

## Naked Clumping Bamboo

### Naked Clumping Bamboo

*Fargesia denudata*

Height: 10 feet

Spread: 10 feet

Sunlight: ○ ●

Hardiness Zone: 6b

#### Description:

This imposing selection makes a beautiful screen or accent in the garden; this bamboo is tolerant to full sun, but prefers some afternoon shade; a vigorous variety

#### Ornamental Features

Naked Clumping Bamboo is primarily valued in the landscape or garden for its cascading habit of growth. Its narrow leaves remain green in colour throughout the year.

#### Landscape Attributes

Naked Clumping Bamboo is an herbaceous evergreen perennial with a shapely form and gracefully arching stalks. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and can be pruned at anytime. It has no significant negative characteristics.

Naked Clumping Bamboo is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

## Naked Clumping Bamboo

---

### Planting & Growing

Naked Clumping Bamboo will grow to be about 10 feet tall at maturity, with a spread of 10 feet. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America. It can be propagated by division.
