### Description:

An elegant variety producing full, yellow cup shaped blooms; needs full sun and well-drained soil; moderate fragrance; a robust and free flowering rose; makes a great cut flower

### Ornamental Features

Symphony Rose features showy lightly-scented yellow cup-shaped flowers at the ends of the branches from late spring to early fall. The flowers are excellent for cutting. It has green deciduous foliage. The serrated oval compound leaves do not develop any appreciable fall colour.

### Landscape Attributes

Symphony Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance shrub that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease
- Spiny

Symphony Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

### Planting & Growing

Symphony Rose will grow to be about 3 feet tall at maturity, with a spread of 30 inches. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 20 years.

## Symphony Rose

---

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
