

Orange Sceptre Butterfly Bush

Orange Sceptre Butterfly Bush *Buddleia 'Orange Sceptre'*

Height: 8 feet

Spread: 6 feet

Sunlight: ○

Hardiness Zone: 8b

Other Names: Summer Lilac

Description:

A tremendous, unique variety presenting upright orange flower spikes that bloom from the bottom up in whorls; blooms year round in mild climates, with a peak season of fall through spring; attracts butterflies and hummingbirds

Ornamental Features

Orange Sceptre Butterfly Bush features showy spikes of fragrant orange tubular flowers at the ends of the branches from early fall to early spring. The flowers are excellent for cutting. Its tomentose narrow leaves remain green in colour with curious grayish green undersides throughout the year.

Landscape Attributes

Orange Sceptre Butterfly Bush is an open multi-stemmed evergreen perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cut back to the ground in late winter before active growth resumes. It is a good choice for attracting bees, butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Orange Sceptre Butterfly Bush is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Orange Sceptre Butterfly Bush

Planting & Growing

Orange Sceptre Butterfly Bush will grow to be about 8 feet tall at maturity, with a spread of 6 feet. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. Although it is technically a woody plant, this fast-growing plant can be expected to behave as a perennial in our climate if planted outdoors over the winter, usually regrowing from its base (crown) the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

Orange Sceptre Butterfly Bush is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
