

Miracle Night St. John's Wort

Miracle® Night St. John's Wort *Hypericum x inodorum 'ALLMADNE'*

Height: 30 inches

Spread: 30 inches

Sunlight: ○ ●

Hardiness Zone: 6b

Group/Class: Miracle® Series

Description:

Attractive, bright yellow buttercup flowers are followed by shiny, dark crimson berries, set against dark green foliage that blushes to red; plant as a specimen, low hedge, or mass in showy drifts; very popular in cut flower arrangements

Ornamental Features

Miracle Night St. John's Wort has masses of beautiful yellow buttercup flowers at the ends of the branches from late spring to early summer, which are most effective when planted in groupings. The flowers are excellent for cutting. It features an abundance of magnificent crimson berries from mid summer to mid fall. It has dark red-variegated dark green foliage. The pointy leaves do not develop any appreciable fall colour. The crimson stems can be quite attractive.

Landscape Attributes

Miracle Night St. John's Wort is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds, bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Miracle Night St. John's Wort is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Groundcover
- Container Planting

Miracle Night St. John's Wort

Planting & Growing

Miracle Night St. John's Wort will grow to be about 30 inches tall at maturity, with a spread of 30 inches. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. This is a self-pollinating variety, so it doesn't require a second plant nearby to set fruit.

This shrub does best in full sun to partial shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Miracle Night St. John's Wort makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
