

White Powderpuff

White Powderpuff *Calliandra haematocephala* 'Alba'

Height: 15 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 9a

Other Names: Powderpuff Tree

Description:

This is a large, multiple trunked, low branching evergreen shrub producing ferny, dark green foliage; large, white powderpuff blooms in fall and winter, with some sporadic blooming year round; an interesting accent shrub

Ornamental Features

White Powderpuff features showy white pincushion flowers along the branches from early fall to late winter. It has attractive dark green evergreen foliage. The oval bipinnately compound leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

White Powderpuff is a multi-stemmed evergreen shrub with a mounded form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting birds and butterflies to your yard. It has no significant negative characteristics.

White Powderpuff is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

White Powderpuff will grow to be about 15 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.

White Powderpuff makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
