

## Zwergform Wustemeyer Korean Fir

### Zwergform Wustemeyer Korean Fir *Abies koreana* 'Zwergform Wustemeyer'

Height: 4 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 5a

#### Description:

A striking evergreen conifer presenting lush green needles with silvery undersides; extremely slow growing, with a dense, rounded habit; an excellent accent plant to create interest in the garden or landscape

#### Ornamental Features

Zwergform Wustemeyer Korean Fir is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has attractive forest green foliage with silver undersides which emerges light green in spring. The needles are highly ornamental and remain forest green throughout the winter.

#### Landscape Attributes

Zwergform Wustemeyer Korean Fir is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Zwergform Wustemeyer Korean Fir is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

#### Planting & Growing

Zwergform Wustemeyer Korean Fir will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

## Zwergform Wustemeyer Korean Fir

---

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth. It is not particular as to soil pH, but grows best in sandy soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.
