

Silverstream Tulip

Silverstream Tulip

Tulipa 'Silverstream'

Height: 20 inches

Spread: 8 inches

Spacing: 6 inches

Sunlight: ○

Hardiness Zone: 3a

Group/Class: Darwin Tulip

Description:

A charming variety adding a touch of softness to spring garden beds, borders and containers; classically shaped blooms in shades of butter yellow and pale pink are streaked with reds and cream; gray-green foliage edged in cream; excellent cut flower

Ornamental Features

Silverstream Tulip has masses of beautiful lightly-scented buttery yellow cup-shaped flowers with rose overtones, yellow eyes and red streaks at the ends of the stems in mid spring, which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves remain grayish green in colour with distinctive creamy white edges throughout the season.

Landscape Attributes

Silverstream Tulip is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Silverstream Tulip is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Silverstream Tulip

Planting & Growing

Silverstream Tulip will grow to be about 16 inches tall at maturity, with a spread of 8 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 6 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Silverstream Tulip is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.
