

Sandra Ann Azalea

Sandra Ann Azalea *Rhododendron 'Sandra Ann'*

Height: 4 feet

Spread: 5 feet

Sunlight: ○ ●

Hardiness Zone: 6a

Group/Class: Girard Hybrids

Description:

This dazzling azalea is bathed in clusters of beautiful lavender-pink blooms with a prominent red blotch; an excellent choice to mass in groupings, or as an elegant focal point of the garden; must have rich acidic soil

Ornamental Features

Sandra Ann Azalea is bathed in stunning clusters of lightly-scented lavender trumpet-shaped flowers with pink overtones and a red blotch at the ends of the branches in late spring before the leaves. It has green deciduous foliage. The narrow leaves do not develop any appreciable fall colour.

Landscape Attributes

Sandra Ann Azalea is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Sandra Ann Azalea is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Sandra Ann Azalea will grow to be about 4 feet tall at maturity, with a spread of 5 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

Sandra Ann Azalea

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
