

### **Caramba Shrub Rose** *Rosa 'Tanabamar'*

Height: 24 inches

Spread: 3 feet

Sunlight: ☉

Hardiness Zone: 4b

Group/Class: Shrub Rose

#### **Description:**

Clusters of bright orange red flowers with gold centers and white petal reverses, provide a continuous display of color; highly pest and disease resistant; excellent as groundcover or along walkways

#### **Ornamental Features**

Caramba Shrub Rose features showy scarlet flowers with gold eyes and a white reverse at the ends of the branches from late spring to mid fall. The flowers are excellent for cutting. It has dark green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall color.

#### **Landscape Attributes**

Caramba Shrub Rose is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This shrub will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Caramba Shrub Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Caramba Shrub Rose will grow to be about 24 inches tall at maturity, with a spread of 3 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
