

**Blue Temptation Iris**  
*Iris 'Blue Temptation'*

Plant Height: 32 inches

Flower Height: 4 feet

Spread: 30 inches

Spacing: 24 inches

Sunlight:

Hardiness Zone: 3a

Group/Class: Tall Bearded

**Description:**

This impressive iris produces dazzling cerulean blue blooms with remarkable uniformity that even extends to the falls and beards; a stunning addition to the perennial border; excellent massed in groupings in the garden; will quickly form dense colonies

**Ornamental Features**

Blue Temptation Iris has masses of beautiful blue flag-like flowers at the ends of the stems from mid to late spring, which emerge from distinctive navy blue flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves remain grayish green in color throughout the season.

**Landscape Attributes**

Blue Temptation Iris is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Blue Temptation Iris is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

### **Planting & Growing**

Blue Temptation Iris will grow to be about 32 inches tall at maturity extending to 4 feet tall with the flowers, with a spread of 30 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
