

Helen Corbet Japanese Yew
Taxus cuspidata 'Helen Corbet'

Height: 5 feet

Spread: 5 feet

Sunlight: ○ ● ●

Hardiness Zone: 4a

Description:

A dwarf evergreen shrub featuring beautiful bright yellow foliage in spring which fades to chartreuse-lime green; very compact form, ideal for a color accent in the home garden or rock garden, color is best with some shade

Ornamental Features

Helen Corbet Japanese Yew is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has attractive lime green-variegated chartreuse foliage which emerges yellow in spring. The ferny sprays of foliage are highly ornamental and remain chartreuse throughout the winter.

Landscape Attributes

Helen Corbet Japanese Yew is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Helen Corbet Japanese Yew is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use
- Topiary

Planting & Growing

Helen Corbet Japanese Yew will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This shrub performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
