

Corvair Spinach
Spinacia oleracea 'Corvair'

Height: 12 inches

Spread: 12 inches

Sunlight:

Hardiness Zone: (annual)

Description:

A fast growing and high yielding leafy green, high in vitamin K; excellent in containers or gardens during spring and fall; slow to bolt, this selection produces smooth, dark green leaves that are tender and mild; wonderful added to salads or smoothies

Edible Qualities

Corvair Spinach is an annual vegetable plant that is commonly grown for its edible qualities. The oval dark green leaves can be harvested at any time in the season. The leaves have a mild taste and a soft texture.

The leaves are most often used in the following ways:

- Fresh Eating
- Eating When Cooked/Prepared
- Cooking
- Canning
- Freezing

Planting & Growing

Corvair Spinach will grow to be about 12 inches tall at maturity, with a spread of 12 inches. This fast-growing vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant is typically grown in a designated vegetable garden. It does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America.

Corvair Spinach is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing the canvas against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
