

**Profusion Long Leaf Waxflower**  
*Philotheca myoporoides 'Profusion'*

Height: 5 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: 7b

Other Names: *Eriostemon myoporoides*

**Description:**

A hardy compact shrub featuring a profusion of white flowers from pink buds in late winter and early spring; aromatic leaves carry an apple scent; tolerates frost and dry periods; responds very well to pruning

**Ornamental Features**

Profusion Long Leaf Waxflower has masses of beautiful white star-shaped flowers along the branches from late winter to early spring, which emerge from distinctive shell pink flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. It has dark green evergreen foliage. The fragrant narrow leaves remain dark green throughout the winter.

**Landscape Attributes**

Profusion Long Leaf Waxflower is a multi-stemmed evergreen shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Profusion Long Leaf Waxflower is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

### **Planting & Growing**

Profusion Long Leaf Waxflower will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type, but has a definite preference for acidic soils, and is subject to chlorosis (yellowing) of the foliage in alkaline soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.
