

Equinox Valley Lilac
Syringa 'Equinox Valley'

Height: 15 feet

Spread: 10 feet

Sunlight: ☉

Hardiness Zone: 3a

Description:

A magnificent tall shrub featuring large upright panicles of deliciously fragrant lavender-purple double flowers in spring on sturdy branches; breathtaking in bloom; needs full sun and well-drained soil, limited suckering, good disease resistance

Ornamental Features

Equinox Valley Lilac features showy panicles of fragrant lavender flowers rising above the foliage in mid spring, which emerge from distinctive plum purple flower buds. The flowers are excellent for cutting. It has bluish-green deciduous foliage. The heart-shaped leaves do not develop any appreciable fall color.

Landscape Attributes

Equinox Valley Lilac is a multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This shrub will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Equinox Valley Lilac is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Equinox Valley Lilac will grow to be about 15 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
