

**Barbara Barnette Tropical Water Lily**  
*Nymphaea 'Barbara Barnette'*

Plant Height: 12 inches

Flower Height: 16 inches

Spread: 6 feet

Sunlight:

Hardiness Zone: 9a

Other Names: Waterlily

**Description:**

Tropical water lily featuring stunning fuchsia star-shaped flowers with golden-yellow centers; interesting green foliage is heavily dappled, and has maroon streaks; easy to care for; water lilies dislike moving water; annual in colder climates

**Ornamental Features**

Barbara Barnette Tropical Water Lily features showy lightly-scented fuchsia star-shaped flowers with gold eyes and yellow centers at the ends of the stems from early summer to late fall. The flowers are excellent for cutting. Its attractive glossy round leaves remain bluish-green in color with showy burgundy variegation and tinges of coppery-bronze throughout the year.

**Landscape Attributes**

Barbara Barnette Tropical Water Lily is an herbaceous evergreen perennial with a low habit of growth, spreading atop the surface of the water. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It has no significant negative characteristics.

Barbara Barnette Tropical Water Lily is ideally suited for growing in a pond, water garden or patio water container, and is recommended for the following landscape applications;

- Water Gardens
- Naturalizing And Woodland Gardens
- Container Planting
- Bog Gardens

### Planting & Growing

Barbara Barnette Tropical Water Lily will grow to be about 12 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 6 feet. Its foliage tends to remain dense right to the water, not requiring facer plants in front. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant does best in full sun to partial shade. As an aquatic plant, it requires a suitable water garden environment and will benefit from special planting and ongoing care practices; consult one of our in-store experts for further details and instructions. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Barbara Barnette Tropical Water Lily is a fine choice for the water garden, but it is also a good selection for planting in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when grown in outdoor pots and containers, aquatic plants like this one will require a special growing environment that meets their requirement for consistent moisture.
