

**Badlands Switch Grass**  
*Panicum virgatum 'Badlands'*

Height: 5 feet

Spread: 3 feet

Sunlight:

Hardiness Zone: 4a

**Description:**

This impressive, tall variety is noted for having dark purple tips on each of the blue-green leaves; fine textured purple flower panicles rise above the foliage in summer; seed plumes persist through winter adding interest

**Ornamental Features**

Badlands Switch Grass features airy plumes of purple flowers rising above the foliage in mid summer. Its attractive grassy leaves are bluish-green in color with prominent deep purple tips. As an added bonus, the foliage turns a gorgeous coppery-bronze in the fall. The brick red seed heads are carried on showy plumes displayed in abundance from late summer to mid fall. The steel blue stems are very colorful and add to the overall interest of the plant.

**Landscape Attributes**

Badlands Switch Grass is an herbaceous perennial grass with an indistinguished habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cut back to the ground in late winter before active growth resumes. It has no significant negative characteristics.

Badlands Switch Grass is recommended for the following landscape applications;

- Accent
- Vertical Accent
- Mass Planting
- General Garden Use

### **Planting & Growing**

Badlands Switch Grass will grow to be about 4 feet tall at maturity, with a spread of 3 feet. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 15 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type, but has a definite preference for alkaline soils, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
