

**Silver Threads And Golden Needles
Hosta**

Hosta 'Silver Threads And Golden Needles'

Plant Height: 4 inches

Flower Height: 6 inches

Spread: 9 inches

Spacing: 7 inches

Sunlight: ● ●

Hardiness Zone: 2a

Other Names: Plantain Lily, Funkia

Description:

This dwarf hosta has beautiful ornamental leaves that have light green streaked centres with wide gold/cream margins and frosty overlay giving a silvery appearance

Ornamental Features

Silver Threads And Golden Needles Hosta features dainty spikes of lavender tubular flowers rising above the foliage from late spring to early summer. Its attractive tiny textured pointy leaves remain light green in color with showy gold variegation throughout the season.

Landscape Attributes

Silver Threads And Golden Needles Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Silver Threads And Golden Needles Hosta is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Groundcover

Planting & Growing

Silver Threads And Golden Needles Hosta will grow to be only 4 inches tall at maturity extending to 6 inches tall with the flowers, with a spread of 9 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 7 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
