#### Ornamental Features

Rose Carpet False Indigo features showy racemes of rose pea-like flowers rising above the foliage from early to mid summer. It has attractive emerald green deciduous foliage. The ferny compound leaves are highly ornamental but do not develop any appreciable fall colour.

#### Landscape Attributes

Rose Carpet False Indigo is a multi-stemmed deciduous shrub with a ground-hugging habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Rose Carpet False Indigo is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

### Planting & Growing

Rose Carpet False Indigo will grow to be about 12 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 4 feet. It has a low canopy. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. This is a selected variety of a species not originally from North America.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
