

Soap Aloe

Soap Aloe

Aloe maculata

Plant Height: 14 inches

Flower Height: 3 feet

Spread: 14 inches

Sunlight: ☉

Hardiness Zone: 9b

Other Names: Zebra Aloe, syn. *Aloe saponaria*

Description:

A beautiful stemless variety producing dark green rosettes with gray spotting, arranged in lines, and red teeth along the margins; produces racemes of flat topped, orange-red flower clusters in summer; a wonderful garden or container accent

Ornamental Features

Soap Aloe's attractive succulent sword-like leaves remain dark green in colour with distinctive gray spots and tinges of red throughout the year on a plant with an upright spreading habit of growth. It features dainty racemes of orange tubular flowers with red overtones and purple tips rising above the foliage from early to late summer.

Landscape Attributes

Soap Aloe is an herbaceous evergreen perennial with an upright spreading habit of growth. Its wonderfully bold, coarse texture can be very effective in a balanced garden composition.

This is a relatively low maintenance plant, and usually looks its best without pruning, although it will tolerate pruning. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spiny

Soap Aloe is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

Soap Aloe

Planting & Growing

Soap Aloe will grow to be about 14 inches tall at maturity extending to 3 feet tall with the flowers, with a spread of 14 inches. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. This species is not originally from North America. It can be propagated by division.

Soap Aloe is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
