Northern Exposure™ Sienna Coral Bells

Heuchera 'TNHEUNESI'

Plant Height: 14 inches

Flower Height: 22 inches

Spread: 20 inches

Spacing: 16 inches

Sunlight: ○ ● ●

Hardiness Zone: 4a

Other Names: Coralbells, Alumroot

Description:

This showy garden plant produces crisp, bright green leaves in spring, blending to sienna orange in summer; forms a dense, medium size mound; great rust resistance and longevity; excellent for defining border edges with bright, contrasting color

Ornamental Features

Northern Exposure Sienna Coral Bells features dainty spikes of pink bell-shaped flowers rising above the foliage from mid to late spring. Its attractive crinkled round leaves emerge light green in spring, turning orange in colour with distinctive chartreuse edges and tinges of coppery-bronze the rest of the year. The red stems can be quite attractive.

Landscape Attributes

Northern Exposure Sienna Coral Bells is a dense herbaceous evergreen perennial with tall flower stalks held atop a low mound of foliage. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Northern Exposure Sienna Coral Bells is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover
- Container Planting

Planting & Growing

Northern Exposure Sienna Coral Bells will grow to be about 14 inches tall at maturity extending to 22 inches tall with the flowers, with a spread of 20 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 16 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evergreen perennial, this plant will typically keep its form and foliage year-round.

This plant performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Northern Exposure Sienna Coral Bells is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
