Swifty Rose Multiflora Meadow Sage

Swifty™ Rose Multiflora Meadow Sage

Salvia nemorosa 'Swifty Rose Multiflora'

Plant Height: 6 inches

Flower Height: 12 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight: ○

Hardiness Zone: 4a

Other Names: Perennial Salvia

Group/Class: Swifty Series

Description:

A compact, dense, clump forming variety with multiple flower spikes of long lasting rose flowers from reddish pink buds; somewhat drought tolerant; excellent for the sunny border or containers; very striking when massed in the garden or borders

Ornamental Features

Swifty Rose Multiflora Meadow Sage has masses of beautiful spikes of rose flowers with burgundy calyces rising above the foliage from late spring to mid summer, which emerge from distinctive hot pink flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its fragrant narrow leaves remain grayish green in colour throughout the season.

Landscape Attributes

Swifty Rose Multiflora Meadow Sage is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting butterflies and hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Swifty Rose Multiflora Meadow Sage is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Swiftly Rose Multiflora Meadow Sage will grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Swiftly Rose Multiflora Meadow Sage is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
