### Sweet Daisy™ Rebecca Shasta Daisy

*Leucanthemum x superbum 'Rebecca'*

Height: 12 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight:

Hardiness Zone: 4a

Group/Class: Sweet Daisy Series

#### Description:

An outstanding variety featuring multitudes of double blooms with fringed white petals, contrasting dark green foliage; a beautiful addition to the garden when massed; exceptionally hardy and blooms throughout the summer

#### Ornamental Features

Sweet Daisy Rebecca Shasta Daisy has masses of beautiful white daisy flowers with gold eyes at the ends of the stems from early to late summer, which emerge from distinctive buttery yellow flower buds, and which are most effective when planted in groupings. The flowers are excellent for cutting. Its serrated narrow leaves remain dark green in colour throughout the season.

#### Landscape Attributes

Sweet Daisy Rebecca Shasta Daisy is an herbaceous perennial with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. It is a good choice for attracting butterflies to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Sweet Daisy Rebecca Shasta Daisy is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting

### Planting & Growing

Sweet Daisy Rebecca Shasta Daisy will grow to be about 10 inches tall at maturity, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Sweet Daisy Rebecca Shasta Daisy is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
