Kangaroo Island Fuchsia

Kangaroo Island Fuchsia *Correa reflexa* 'Kangaroo Island'

Height: 4 feet

Spread: 4 feet

Sunlight:

Hardiness Zone: 9a

Other Names: Kangaroo Island Correa, Australian Fuchsia

Description:

Dense, glossy, dark olive green leaves cover this low evergreen shrub; narrow, tubular, lipstick red flowers appear from fall through spring; cool coastal sun to part shade; drought tolerant once established, but best with some summer irrigation

Ornamental Features

Kangaroo Island Fuchsia has clusters of cherry red tubular flowers with yellow tips hanging below the branches from mid fall to late spring, which are interesting on close inspection. It has attractive olive green evergreen foliage. The small glossy oval leaves are highly ornamental and remain olive green throughout the winter.

Landscape Attributes

Kangaroo Island Fuchsia is a dense multi-stemmed evergreen shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting hummingbirds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Kangaroo Island Fuchsia is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Kangaroo Island Fuchsia will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. This plant will benefit from an application of bonemeal and/or mycorrhizal fertilizer at the time of planting. It is not particular as to soil type or pH, and is able to handle environmental salt. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America.

Kangaroo Island Fuchsia makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
