Bellini® Strawberry Crapemyrtle

Lagerstroemia indica 'Strawconbel'

Height: 4 feet

Spread: 4 feet

Sunlight: ○ ●

Hardiness Zone: 7a

Other Names: Crape Myrtle, Crepe Myrtle

Group/Class: Bellini Series

Description:

This beautiful dwarf crapemyrtle produces volumes of rich rose-pink frilly blooms, over dark green, glossy foliage; early blooming, and has excellent mildew resistance; a captivating focal point for the garden or border; also good for container planting

Ornamental Features

Bellini Strawberry Crapemyrtle is clothed in stunning panicles of rose frilly flowers with red overtones at the ends of the branches from late spring to late summer, which emerge from distinctive dark red flower buds. It has dark green deciduous foliage. The glossy oval leaves turn orange and yellow in fall.

Landscape Attributes

Bellini Strawberry Crapemyrtle is a dense multi-stemmed deciduous shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep. Trim off the flower heads after they fade and die to encourage more blooms late into the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Bellini Strawberry Crapemyrtle is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Groundcover
- Container Planting

Planting & Growing

Bellini Strawberry Crapemyrtle will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. To help this plant achieve its best flowering performance, periodically apply a flower-boosting fertilizer from early spring through into the active growing season. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.

Bellini Strawberry Crapemyrtle makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our experts for more information on how to protect it over the winter months.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
