Plant Height: 10 inches

Flower Height: 18 inches

Spread: 12 inches

Spacing: 6 inches

Sunlight:

Hardiness Zone: 3a

Description:

A heavenly double petaled tulip in shades of peach, yellow, and pink, with green tinges on the outer petals; early blooming and fragrant; a wonderful addition that is visually stunning in the garden or containers

Ornamental Features

Peach Melba Tulip has masses of beautiful fragrant double peach cup-shaped flowers with yellow overtones and a pink flare at the ends of the stems from early to mid spring, which are most effective when planted in groupings. The flowers are excellent for cutting. Its sword-like leaves remain bluish-green in colour throughout the season.

Landscape Attributes

Peach Melba Tulip is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It has no significant negative characteristics.

Peach Melba Tulip is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

Peach Melba Tulip

Planting & Growing

Peach Melba Tulip will grow to be about 10 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 6 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen! As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
