Height: 24 inches

Spread: 30 inches

Spacing: 24 inches

Sunlight: ◐ ●

Hardiness Zone: (annual)

Other Names: Flame Nettle, Painted Nettle

Group/Class: Terra Nova Collection

Description:

This beautiful selection has luminous, lime green leaves that mature to lemon, marked with dark cayenne; presents a great self-branching, mounded habit; perfect for gardens, containers, hanging baskets and mixed borders

Ornamental Features

Terra Nova Pepperpot Coleus' attractive serrated pointy leaves emerge lime green in spring, turning lemon yellow in colour with distinctive dark red spots and tinges of lime green the rest of the year on a plant with a mounded habit of growth.

Landscape Attributes

Terra Nova Pepperpot Coleus is an herbaceous annual with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant. The flowers of this plant may actually detract from its ornamental features, so they can be removed as they appear. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Terra Nova Pepperpot Coleus is recommended for the following landscape applications;

- Container Planting
- Hanging Baskets

Planting & Growing

Terra Nova Pepperpot Coleus will grow to be about 24 inches tall at maturity, with a spread of 30 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in partial shade to shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is not particular as to soil pH, but grows best in rich soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Terra Nova Pepperpot Coleus is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
