Description:

Free flowering and self cleaning this upright mounded variety is ideal for patio containers and landscape applications; large red flowers with golden yellow center rings stand out against green, ferny foliage; easy to grow; heat and drought tolerant

Ornamental Features

Beezar Fire Wheel Bidens has masses of beautiful semi-double red daisy flowers with gold eyes and a gold ring at the ends of the stems from late spring to mid fall, which are most effective when planted in groupings. Its tiny deeply cut ferny leaves remain green in colour throughout the season.

Landscape Attributes

Beezar Fire Wheel Bidens is an herbaceous annual with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting butterflies to your yard. It has no significant negative characteristics.

Beezar Fire Wheel Bidens is recommended for the following landscape applications;

- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Beezar Fire Wheel Bidens will grow to be about 12 inches tall at maturity, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Beezar Fire Wheel Bidens is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
