T-REX&Trade; Dancing Peacock Begonia

Begonia 'Dancing Peacock'

Height: 24 inches

Spread: 28 inches

Spacing: 24 inches

Sunlight: ●

Hardiness Zone: (annual)

Group/Class: T-Rex Series

Description:

An outstanding shade begonia, producing large colorful, rose-purple, silver and olive green foliage; soft pink flowers appear atop during the summer months; excellent for patio containers and hanging baskets; low maintenance

Ornamental Features

T-REX&Trade; Dancing Peacock Begonia features dainty semi-double shell pink frilly flowers at the ends of the stems from mid spring to mid fall. Its pointy palmate leaves remain rose in colour with showy olive green variegation and tinges of silver throughout the season.

Landscape Attributes

T-REX&Trade; Dancing Peacock Begonia is an herbaceous annual with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a high maintenance plant that will require regular care and upkeep, and usually looks its best without pruning, although it will tolerate pruning. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

T-REX&Trade; Dancing Peacock Begonia is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use
- Container Planting
- Hanging Baskets

Planting & Growing

T-REX&Trade; Dancing Peacock Begonia will grow to be about 24 inches tall at maturity, with a spread of 28 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 24 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. The flower stalks can be weak and so it may require staking in exposed sites or excessively rich soils. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in a shady location. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. This plant does not require much in the way of fertilizing once established. It is not particular as to soil pH, but grows best in rich soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone over the growing season to conserve soil moisture. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

T-REX&Trade; Dancing Peacock Begonia is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. It can be used either as 'filler' or as a 'thriller' in the 'spiller-thriller-filler' container combination, depending on the height and form of the other plants used in the container planting. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
