Golden Marjoram

Origanum majorana 'Aureum'

Height: 12 inches

Spread: 18 inches

Spacing: 20 inches

Sunlight: ☉

Hardiness Zone: (annual)

Description:

This variety is noted for its mild, delicate flavor and pleasant aroma; low growing and mat forming variety with bright golden yellow leaves; does well in sandy loam; good heat and drought tolerance; a perfect addition to the herb garden and containers

Edible Qualities

Golden Marjoram is an annual herb that is typically grown for its edible qualities. The fragrant oval chartreuse leaves with hints of gold can be harvested at any time in the season. The leaves have a mild taste and a sweet fragrance.

The leaves are most often used in the following ways:

- Fresh Eating
- Cooking
- Seasoning

Planting & Growing

Golden Marjoram will grow to be about 10 inches tall at maturity, with a spread of 18 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 20 inches apart. Its foliage tends to remain low and dense right to the ground. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant can be difficult to integrate into a landscape or flower garden, and is best grown in a designated herb garden. It should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil pH, but grows best in sandy soils. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Golden Marjoram is a good choice for the edible garden, but it is also well-suited for use in outdoor pots and containers. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
