Plant Height: 18 inches

Flower Height: 24 inches

Spread: 20 inches

Spacing: 20 inches

Sunlight: ○ ◐

Hardiness Zone: 4a

Other Names: Flore Pleno Ranunculus

Description:

A lovely selection of bright yellow, tightly doubled rosette-like blooms on tall stems, rising above toothy green foliage; blooming from late spring to summer, perfect for perennial beds, borders and cutting gardens

Ornamental Features

Double Meadow Buttercup has masses of beautiful double yellow round flowers at the ends of the stems from mid spring to early summer, which are most effective when planted in groupings. The flowers are excellent for cutting. Its serrated lobed leaves remain green in colour throughout the season.

Landscape Attributes

Double Meadow Buttercup is an herbaceous perennial with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a relatively low maintenance plant, and should be cut back in late fall in preparation for winter. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Double Meadow Buttercup is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Naturalizing And Woodland Gardens

Double Meadow Buttercup

Planting & Growing

Double Meadow Buttercup will grow to be about 18 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 20 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 20 inches apart. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 5 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
