Height: 10 feet

Spread: 3 feet

Sunlight: ○ ◐

Hardiness Zone: 4a

Group/Class: Climbing Rose

Description:

This fast growing, vigorous plant bears an abundance of fully double deep pink blooms throughout the season; heavily fragrant; a stunning addition to the garden, trained on arbors, trellises and fences; excellent addition to fresh cut flower displays

Ornamental Features

Winifred Coulter Rose features showy clusters of fragrant double pink flowers along the branches from late spring to early fall. The flowers are excellent for cutting. It has dark green deciduous foliage. The glossy oval compound leaves do not develop any appreciable fall colour.

Landscape Attributes

Winifred Coulter Rose is a multi-stemmed deciduous woody vine with a twining and trailing habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a high maintenance woody vine that will require regular care and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It is a good choice for attracting bees to your yard. It has no significant negative characteristics.

Winifred Coulter Rose is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

Winifred Coulter Rose

Planting & Growing

Winifred Coulter Rose will grow to be about 10 feet tall at maturity, with a spread of 3 feet. As a climbing rose, it can be leggy near the base and may be concealed by underplanting with lower-growing facer plants. It should be planted near a fence, trellis or other landscape structure where it can be trained to grow upwards on it, or allowed to trail off a retaining wall or slope. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 30 years.

This woody vine does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.

This plant is not reliably hardy in our region, and certain restrictions may apply; contact the store for more information.
