Bush Crystal Kangaroo Paw

Anigozanthos 'Bush Crystal'

Plant Height: 12 inches

Flower Height: 18 inches

Spread: 30 inches

Sunlight:

Hardiness Zone: (annual)

Other Names: Cat's Paw

Group/Class: Bush Series

Description:

Bright velvety crimson-pink flowers, covered in fine colored hair, rise above bright green, clusters of sword-like foliage; a compact upright habit, perfect for small beds or containers; drought tolerant once established; low maintenance

Ornamental Features

Bush Crystal Kangaroo Paw features unusual racemes of rose flowers with crimson overtones rising above the foliage from late spring to mid fall. The flowers are excellent for cutting. Its sword-like leaves remain green in colour throughout the year.

Landscape Attributes

Bush Crystal Kangaroo Paw is an open herbaceous annual with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other garden plants with finer foliage.

This is a relatively low maintenance plant, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Bush Crystal Kangaroo Paw is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Container Planting

Bush Crystal Kangaroo Paw

Planting & Growing

Bush Crystal Kangaroo Paw will grow to be about 12 inches tall at maturity extending to 18 inches tall with the flowers, with a spread of 30 inches. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant should not require much in the way of fertilizing once established, although it may appreciate a shot of general-purpose fertilizer from time to time early in the growing season. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Bush Crystal Kangaroo Paw is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
