Height: 18 inches

Spread: 30 inches

Spacing: 4 feet

Sunlight: ◐ ●

Hardiness Zone: 2a

Other Names: Plantain Lily, Funkia

Description:

An eye-catching medium sized variety featuring mounds foliage that emerge bright yellow with red petioles; leaves mature to bright green with a red flush later in the season; pale lavender flowers appear on tall scapes in mid summer; low maintenance

Ornamental Features

Chris' China Star Hosta features dainty spikes of lavender tubular flowers rising above the foliage in mid summer. Its attractive large textured pointy leaves emerge yellow in spring, turning chartreuse in colour with hints of ruby-red throughout the season.

Landscape Attributes

Chris' China Star Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Chris' China Star Hosta is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Chris' China Star Hosta

Planting & Growing

Chris' China Star Hosta will grow to be about 15 inches tall at maturity, with a spread of 30 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 4 feet apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
