

## Juha Hosta

### Juha Hosta *Hosta 'Juha'*

Height: 15 inches

Spread: 16 inches

Spacing: 12 inches

Sunlight: ● ●

Hardiness Zone: 3a

Other Names: Plantain Lily, Funkia

#### Description:

A gray green leaf center with narrow, rippled white margins and some chartreuse streaking; leaf is narrow and pointy; spikes of lavender flowers in early summer; an excellent small variety for edging

#### Ornamental Features

Juha Hosta features dainty spikes of lavender tubular flowers rising above the foliage in mid summer. Its attractive narrow leaves remain grayish green in color with distinctive white edges and tinges of chartreuse throughout the season.

#### Landscape Attributes

Juha Hosta is an herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Juha Hosta is recommended for the following landscape applications;

### Planting & Growing

Juha Hosta will grow to be about 12 inches tall at maturity, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
