

## Mozart Amur Maple

---

### Mozart Amur Maple *Acer ginnala 'Mozam'*

Height: 20 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 4a

#### Description:

A striking pyramidal shaped shrubby tree with a dominant central leader that produces brilliant and reliable fall colors in fiery harvest shades of red and orange; showy red seeds, makes an ideal accent tree

#### Ornamental Features

Mozart Amur Maple is primarily grown for its highly ornamental fruit. It features abundant showy red samaras in late summer. It has rich green deciduous foliage. The lobed leaves turn outstanding shades of orange, scarlet and dark red in the fall.

#### Landscape Attributes

Mozart Amur Maple is a multi-stemmed deciduous tree with a distinctive and refined pyramidal form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree, and should only be pruned in summer after the leaves have fully developed, as it may 'bleed' sap if pruned in late winter or early spring. It has no significant negative characteristics.

Mozart Amur Maple is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening

#### Planting & Growing

Mozart Amur Maple will grow to be about 20 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 60 years or more.

## Mozart Amur Maple

---

This tree does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
