Coerulea White Spruce

Coerulea White Spruce

Picea glauca 'Coerulea'

Height: 30 feet

Spread: 10 feet

Sunlight:

Hardiness Zone: 2a

Other Names: White Spruce

Description:

A popular, slow growing, conical shaped evergreen tree with blue-green foliage on strong branches with a more open habit; great as an accent tree; tolerant of drought and wind

Ornamental Features

Coerulea White Spruce is primarily valued in the landscape for its distinctively pyramidal habit of growth. It has attractive bluish-green evergreen foliage. The needles are highly ornamental and remain bluish-green throughout the winter.

Landscape Attributes

Coerulea White Spruce is an open evergreen tree with a strong central leader and a distinctive and refined pyramidal form. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Coerulea White Spruce is recommended for the following landscape applications;

- Accent
- General Garden Use

Planting & Growing

Coerulea White Spruce will grow to be about 30 feet tall at maturity, with a spread of 10 feet. It has a low canopy, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

Coerulea White Spruce

This tree does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This is a selection of a native North American species.
