

Teddy Krueger Jack Pine

Teddy Krueger Jack Pine *Pinus banksiana 'Teddy Krueger'*

Height: 20 feet

Spread: 15 feet

Sunlight: ○

Hardiness Zone: 2a

Description:

An excellent compact selection that tends to grow in an upward irregular shape; tough and hardy, this sometimes shrubby tree makes a great curiosity accent for the garden

Ornamental Features

Teddy Krueger Jack Pine is primarily valued in the landscape for its ornamental upright and spreading habit of growth. It has rich green evergreen foliage. The needles remain green throughout the winter.

Landscape Attributes

Teddy Krueger Jack Pine is a multi-stemmed evergreen tree with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Teddy Krueger Jack Pine is recommended for the following landscape applications;

- Accent
- Hedges/Screening
- General Garden Use

Planting & Growing

Teddy Krueger Jack Pine will grow to be about 20 feet tall at maturity, with a spread of 15 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

Teddy Krueger Jack Pine

This tree should only be grown in full sunlight. It prefers to grow in average to dry locations, and dislikes excessive moisture. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided. This is a selection of a native North American species.
