Skyline Western White Pine

Skyline Western White Pine *Pinus monticola* 'Skyline'

Height: 30 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 4a

Description:

A stately upright pine with dense branching and soft gray-green needles; its tightly columnar habit creates a visual exclamation point; a beautiful accent tree for the home landscape

Ornamental Features

Skyline Western White Pine is primarily valued in the landscape for its rigidly columnar form. It has attractive grayish green evergreen foliage. The needles are highly ornamental and remain grayish green throughout the winter.

Landscape Attributes

Skyline Western White Pine is an evergreen tree with a strong central leader and a narrowly upright and columnar growth habit. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance tree. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Skyline Western White Pine is recommended for the following landscape applications;

- Accent
- Vertical Accent
- General Garden Use

Planting & Growing

Skyline Western White Pine will grow to be about 30 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a fast rate, and under ideal conditions can be expected to live for 80 years or more.

Skyline Western White Pine

This tree should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selection of a native North American species.
