

Loose Park Scotch Pine

Loose Park Scotch Pine *Pinus sylvestris* 'Loose Park'

Height: 8 feet

Spread: 8 feet

Sunlight: ○

Hardiness Zone: 3b

Other Names: Scots Pine

Description:

A fine evergreen specimen shrub which features very showy bluish-green needles on a dense and compact upright form, eventually flattens out with age, very picturesque; the ideal size for the average garden or landscape, quite tough

Ornamental Features

Loose Park Scotch Pine is a dwarf conifer which is primarily valued in the landscape or garden for its interestingly mounded form. It has attractive bluish-green evergreen foliage. The needles are highly ornamental and remain bluish-green throughout the winter.

Landscape Attributes

Loose Park Scotch Pine is a dense multi-stemmed evergreen shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Loose Park Scotch Pine is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Loose Park Scotch Pine will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 60 years or more.

Loose Park Scotch Pine

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selected variety of a species not originally from North America.
