

Nana Fleck Arborvitae

Nana Fleck Arborvitae *Thuja orientalis 'Nana Fleck'*

Height: 6 feet

Spread: 6 feet

Sunlight:

Hardiness Zone: 6a

Other Names: *Platyclusus orientalis*

Description:

An attractive evergreen shrub for color accent in the home landscape, featuring bright green foliage flecked with creamy white tips, useful in foundation plantings, hedges, or focal point in the landscape; very adaptable, protect from drying winter winds

Ornamental Features

Nana Fleck Arborvitae is a dwarf conifer which is primarily valued in the landscape or garden for its ornamental globe-shaped form. It has attractive creamy white-tipped green foliage. The scale-like sprays of foliage are highly ornamental and turn harvest gold in the fall, which persists throughout the winter.

Landscape Attributes

Nana Fleck Arborvitae is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Nana Fleck Arborvitae is recommended for the following landscape applications;

- Accent
- Mass Planting
- Hedges/Screening
- General Garden Use

Planting & Growing

Nana Fleck Arborvitae will grow to be about 6 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 70 years or more.

Nana Fleck Arborvitae

This shrub does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under average home landscape conditions. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
