## Buzzer Lily

### Buzzer Lily

*Lilium 'Buzzer'*

Plant Height: 12 inches

Flower Height: 16 inches

Spread: 12 inches

Spacing: 10 inches

Sunlight:

Hardiness Zone: 4a

Group/Class: Asiatic Hybrid

*Buzzer Lily flowers*

*Photo courtesy of NetPS Plant Finder*

### Description:

An impressive Asiatic lily that produces lovely large, upright, rose-red blooms, quite showy as a garden focal point; this variety is perfect in border planting and is especially good for containers

### Ornamental Features

Buzzer Lily features bold rose trumpet-shaped flowers with red overtones and white throats at the ends of the stems in early summer. The flowers are excellent for cutting. Its narrow leaves remain green in color throughout the season.

### Landscape Attributes

Buzzer Lily is an herbaceous perennial with a rigidly upright and towering form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and should be cut back in late fall in preparation for winter. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Buzzer Lily is recommended for the following landscape applications;

- Mass Planting
- General Garden Use

## Buzzer Lily

---

### Planting & Growing

Buzzer Lily will grow to be about 12 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 12 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 10 inches apart. It grows at a fast rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by multiplication of the underground bulbs; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
