White Broom

White Broom

Cytisus x praecox 'Albus'

Height: 4 feet

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 5b

Other Names: Warminster Broom

White Broom

Photo courtesy of NetPS Plant Finder

Description:

An absolutely stunning low shrub when in bloom, with upright arching branches smothered in white flowers in late spring; somewhat diminutive the rest of the year but not unattractive; extremely tough and durable, tolerant of dry conditions

Ornamental Features

White Broom is smothered in stunning white pea-like flowers along the branches in late spring. It has grayish green deciduous foliage. The compound leaves do not develop any appreciable fall color. The smooth bark and grayish green branches add an interesting dimension to the landscape.

Landscape Attributes

White Broom is an open multi-stemmed deciduous shrub with a shapely form and gracefully arching branches. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a high maintenance shrub that will require regular care and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

White Broom is recommended for the following landscape applications;

- Mass Planting
- Border Edging
- General Garden Use

Planting & Growing

White Broom will grow to be about 4 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is particular about its soil conditions, with a strong preference for clay, alkaline soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
