## Densa Japanese Yew

### Densa Japanese Yew

*Taxus cuspidata* 'Densa'

Height: 3 feet

Spread: 6 feet

Sunlight: ○ ● ●

Hardiness Zone: 4b

#### Description:

A very dense and wide-spreading evergreen shrub with beautiful deep green needles which emerge bright green; excellent for foundation plantings or shrub borders, takes pruning extremely well; one of the few evergreens that loves shade

#### Ornamental Features

Densa Japanese Yew is a dwarf conifer which is primarily valued in the garden for its ornamental upright and spreading habit of growth. It has dark green evergreen foliage which emerges light green in spring. The ferny sprays of foliage remain dark green throughout the winter. The fruits are showy red drupes displayed from early to late fall.

#### Landscape Attributes

Densa Japanese Yew is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It has no significant negative characteristics.

Densa Japanese Yew is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use

#### Planting & Growing

Densa Japanese Yew will grow to be about 3 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

---

This shrub performs well in both full sun and full shade. However, you may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
