Yellow Oleander

Yellow Oleander

Thevetia peruviana

Height: 8 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: (annual)

Other Names: Be Still Tree, Lucky Nut, syn. Cascabela thevetia

Description:

A temperate shrub or small tree grown for its fragrant yellow or apricot flowers in summer; very useful to fill in open areas quickly; often used as a patio plant; can become somewhat sprawling if left unattended; parts of this plant are known to be toxic

Ornamental Features

Yellow Oleander features showy fragrant yellow trumpet-shaped flowers with peach overtones along the branches from mid summer to early fall. Its attractive glossy narrow leaves remain dark green in color throughout the year.

Landscape Attributes

Yellow Oleander is a multi-stemmed annual with an upright spreading habit of growth. Its relatively fine texture sets it apart from other garden plants with less refined foliage.

This is a high maintenance plant that will require regular care and upkeep, and can be pruned at anytime. It is a good choice for attracting birds to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Yellow Oleander is recommended for the following landscape applications;

Planting & Growing

Yellow Oleander will grow to be about 8 feet tall at maturity, with a spread of 5 feet. It tends to be leggy, with a typical clearance of 2 feet from the ground, and should be underplanted with lower-growing perennials. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil pH, but grows best in poor soils, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.
