Sound Of Music Hosta

Hosta 'Sound Of Music'

Height: 3 feet

Spread: 5 feet

Spacing: 30 inches

Sunlight: ● ●

Hardiness Zone: 3a

Other Names: Plantain Lily, Funkia

Description:

A wonderful, large variety adding color and contrast to shaded beds, borders or containers; creamy white centers are edged with medium green; near white to lavender flowers appear on tall scapes during the midsummer months; easy to grow

Ornamental Features

Sound Of Music Hosta features dainty spikes of white bell-shaped flowers with a lavender flare rising above the foliage in mid summer. Its attractive textured heart-shaped leaves remain creamy white in color with distinctive green edges and tinges of yellow throughout the season.

Landscape Attributes

Sound Of Music Hosta is a dense herbaceous perennial with tall flower stalks held atop a low mound of foliage. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Sound Of Music Hosta is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

Planting & Growing

Sound Of Music Hosta will grow to be about 30 inches tall at maturity, with a spread of 5 feet. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 30 inches apart. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant does best in partial shade to shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
