## Alabama Snow Wreath

### Alabama Snow Wreath

*Neviusia alabamensis*

Height: 5 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: 4b

#### Description:

An open airy shrub with arching branches and covered with beautiful feathery blooms in the spring; a good choice for a shrub border where more open arching branches are desired

#### Ornamental Features

Alabama Snow Wreath features airy white pincushion flowers held atop the branches in mid spring. It has green deciduous foliage. The serrated pointy leaves do not develop any appreciable fall color.

#### Landscape Attributes

Alabama Snow Wreath is an open multi-stemmed deciduous shrub with a shapely form and gracefully arching branches. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Alabama Snow Wreath is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Naturalizing And Woodland Gardens

### Planting & Growing

Alabama Snow Wreath will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America.
