

Bachman's™

Growing Since 1885

Blue Beech *Carpinus caroliniana*

Height: 30 feet

Spread: 25 feet

Sunlight: ○ ● ●

Hardiness Zone: 3

Other Names: Blue Beech, Ironwood, Musclemwood, Water Beech

Description:

A beautiful and underused native woodland tree; very interesting gray bark almost muscular in appearance, makes a strong winter statement. Blend of fall colors and curious hop-like fruit. Also available in clump form.

Ornamental Features

The Blue Beech has forest green deciduous foliage on a tree with a round habit of growth. The pointy leaves turn an outstanding orange in the fall. It produces small clusters of tan hop-like fruit from early fall to late winter. The smooth silvery blue bark adds an interesting dimension to the landscape.

Landscape Attributes

The Blue Beech is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This tree will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. It has no significant negative characteristics.

The Blue Beech is recommended for the following landscape applications;

Planting & Growing

The Blue Beech will grow to be about 30 feet tall at maturity, with a spread of 25 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 80 years or more.

This tree performs well in both full sun and full shade. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is native to parts of North America.
