## Gold Strike Alchemilla *Alchemilla 'Gold Strike'*

Plant Height: 12 inches

Flower Height: 24 inches

Spread: 20 inches

Sunlight: ☉ ☽ ●

Hardiness Zone: 3

Other Names: Lady's Mantle

### Description:

A striking, free flowering variety producing bright chartreuse blooms among the velvety gray-green scalloped foliage; has a very compact and consistent habit; perfect in the rock garden, front of border, or containers

### Ornamental Features

Gold Strike Alchemilla features subtle cymes of chartreuse flowers at the ends of the stems from early to mid summer. The flowers are excellent for cutting. Its large lobed leaves remain grayish green in color throughout the season.

### Landscape Attributes

Gold Strike Alchemilla is a dense herbaceous perennial with a mounded form. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Spreading

Gold Strike Alchemilla is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Groundcover

## **Planting & Growing**

Gold Strike Alchemilla will grow to be about 12 inches tall at maturity extending to 24 inches tall with the flowers, with a spread of 20 inches. Its foliage tends to remain dense right to the ground, not requiring facer plants in front. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant performs well in both full sun and full shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
