

## Albowiana Daphne

*Daphne albowiana*

Height: 3 feet

Spread: 4 feet

Sunlight: ● ●

Hardiness Zone: 5b

### Description:

A well behaved small evergreen shrub with yellow-green emerging foliage that turns dark glossy green; unusual, yellow spidery flowers in early spring followed by red berries; does best in a shady site

### Ornamental Features

Albowiana Daphne has fragrant yellow spider-like flowers along the branches in early spring. It has attractive dark green evergreen foliage which emerges chartreuse in spring. The glossy narrow leaves are highly ornamental and remain dark green throughout the winter. It features an abundance of magnificent red berries in mid summer.

### Landscape Attributes

Albowiana Daphne is a multi-stemmed evergreen shrub with a mounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This shrub will require occasional maintenance and upkeep, and should never be pruned except to remove any dieback, as it tends not to take pruning well. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Disease

Albowiana Daphne is recommended for the following landscape applications;

- Accent
- Rock/Alpine Gardens
- General Garden Use
- Container Planting

### Planting & Growing

Albowiana Daphne will grow to be about 3 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 20 years.

This shrub does best in partial shade to shade. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets.

Albowiana Daphne makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
