

Firebird Flowering Dogwood
Cornus florida 'Fircomz'

Height: 25 feet

Spread: 20 feet

Sunlight:

Hardiness Zone: 5b

Description:

An ornamental tree which is absolutely blanketed in rich red flowers with white centers in spring; foliage emerges red-burgundy and matures to deep green with pale yellow variegation; requires rich, well-drained acidic soil and adequate moisture

Ornamental Features

Firebird Flowering Dogwood features showy clusters of crimson flowers with white centers held atop the branches in mid spring. It has buttery yellow-variegated forest green foliage with hints of grayish green which emerges red in spring. The pointy leaves turn an outstanding brick red in the fall. It produces red berries from early to late fall. The warty gray bark adds an interesting dimension to the landscape.

Landscape Attributes

Firebird Flowering Dogwood is a multi-stemmed deciduous tree with a stunning habit of growth which features almost oriental horizontally-tiered branches. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance tree, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting birds to your yard. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects
- Disease

Firebird Flowering Dogwood is recommended for the following landscape applications;

- Accent
- Shade

Planting & Growing

Firebird Flowering Dogwood will grow to be about 25 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 4 feet from the ground, and should not be planted underneath power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This tree does best in full sun to partial shade. You may want to keep it away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
